Art Unit: 1763

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11 and 35 drawn to an apparatus having a gas manifold located at a processing unit (as illustrated in applicant's Figs. 5A and 5B), classified in class 118, subclass 715.
- II. Claims 22, 25-28, 36 and 37, drawn to a gas mixer having one inlet port coupled to two gas sources (Fig. 9), classified in class 118, subclass 715.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, the gas mixer of invention II has separate utility such as a gas mixer for supplying gas to a manifold and processing unit wherein the manifold is not located at the processing unit. See MPEP § 806.05(d).

It is noted that while claims 1-9 recite a manifold located at a processing unit that is clearly a subcombination as outlined above, claims 10, 11 and 35 also recite first and second gas sources in addition to reciting a manifold located at a processing unit. If, for argument's sake, claims 10, 11 and 35 were considered to be drawn to a type of combination instead of a subcombination, such combination claims are still properly restrictable from the Group II subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination (claims 10, 11 and 35) does not require the particulars of the subcombination (claims 22, 25-28, 36 and 37) as claimed because the combination

Art Unit: 1763

does not require the two gas sources to be coupled to the same inlet port of a mixer.

The subcombination has separate utility such as a gas mixer for supplying gas to a manifold and processing unit wherein the manifold is not located at the processing unit.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
